TO WHOMSOEVER IT MAY CONCERN

Soha Kaushal Aggarwal recently completed a comprehensive project on wastewater management at Asian Paints Limited, where she spent nearly a month analyzing the effectiveness of their systems across various locations. Her report presents valuable insights gained from visiting the Research and Technology Centre in Turbhe, Mumbai, and the Manufacturing Plant in Khandala, Maharashtra.

Soha's research focused on the recycling of wash water from process equipment used to manufacture water-based products like Royale, Apex, and Apex Ultima. She examined the high-pressure cleaning systems, closed-loop piping, and storage vessels used to convey, store, and reuse wastewater. Her analysis evaluated the mitigation and efficacy of the process and equipment to ensure that wastewater recycling does not compromise the quality of finished products while maximizing water reuse.

Additionally, Soha explored advanced effluent treatment systems and waste solvent reuse. Her report offers intriguing analysis on the current systems at Asian Paints, and she plans to develop recommendations for improvement during her Diwali break.

We found Soha to be focused, committed, and passionate about sustainability. We wish her the best in her academic journey and recommend her for higher studies in Chemistry at any university of her choice.

Yours truly,
