

Certificate of internship

This is to certify that Soha has completed her internship successfully. In one month of internship, she learnt about the CAR expression on T- cells by flow-cytometry and was given an opportunity to observe the basic experiments under mentor supervision. Soha understood the basic functions and principles of flowcytometry and saw how it is utilized for CAR T-cell therapy. Her mentor also exposed her to the various plots that can be used to analyse the flow cytometer data.

Her mentor also helped her observe the sensitive ELISA procedure using a spectrophotometer. Her mentor helped her understand the data.

Soha was meticulous, diligent and rigorous in all the experiments. She demonstrated deep curiosity and an ability to quickly assimilate information/analyse data.

Given her passion for learning, I would strongly recommend Soha to pursue higher studies in the field of chemistry.
